

Dr. David J. Meyer
Program Manager
Microsystems Technology Office
DARPA

Dr. David Meyer joined DARPA in February 2025 as a program manager in the Microsystems Technology Office. His research interests include electronic, optoelectronic, and acoustic applications of compound semiconductor and ultrawide bandgap materials, advanced device engineering and microfabrication, and 3D microsystem design & manufacturing.

Meyer previously served as the Head of the Electromagnetic Technologies Branch at the Naval Research Laboratory, where he managed a variety of basic and applied research projects related to emerging thin film materials and microwave & millimeter-wave analog electronics for defense applications.

Meyer received his doctorate in materials science and engineering from The Pennsylvania State University, where his research focused on the development of silicon nitride passivation layers for gallium nitride high electron mobility transistors.
