

T. Robert Harris is a research engineer in the Electro-Optical Systems Laboratory, Georgia Tech Research Institute. He received M.S. and Ph.D. degrees in electrical engineering from North Carolina State University. He has a background in semiconductors and microelectronics at the boundary of IC fabrication and CAD design. He works with MEMs, 3D-ICs, and heterogeneous integration, with an expertise in thermal circuit modeling and simulation. His research interests are photonic integrated circuits, photonic quantum computers, process development, MEMs fabrication, and UV system design. He teaches IC fabrication, digital design, circuit analysis, signal processing, and circuit analysis at the School of Electrical and Computer Engineering at Georgia Tech.
