

T. Robert Harris (Ph.D., M.S. E.E, North Carolina State U) is a research engineer in the Electro-Optical Systems Laboratory, Georgia Tech Research Institute. He has a background in semiconductors and microelectronics at the boundary of IC fabrication and CAD design. He has worked with MEMs, 3D-ICs, and heterogeneous integration, with an expertise in thermal circuit modeling and simulation. Currently, his research interests are photonic integrated circuits, photonic quantum computers, on-chip DNA synthesis for computer storage, and UV system design. He teaches digital design at the School of Electrical and Computer Engineering at Georgia Tech.
